

## TEMPERATURE CONTROL RELAY

363.3787-04

Made in Russia

---

The relay is intended for automatic ON/OFF of different devices depending on the temperature.

It is manufactured on the basis of three-digital LED matrix.

The relay is a remote thermostat with connective cables. The following functions are available: manual turning the temperature ON/OFF, indication of load turning ON/OFF / indication of digital current temperature.

"+" consumption commutation is done through the power key usage.

The relays may be used in 12V and 24V cars and tracks of any brand.

---

### Технические характеристики:

Nominal voltage:.....	10-30V
Temperature values:.....	-55°C... +125°C
Indication discreteness:.....	0.1°C (-9.9+99.9°C)
.....	1°C (others)
Error, not more:.....	1C
Temperature ON/OFF range:.....	(-55... +125)/(-55... +125)°C
Temperature ON/OFF discreteness:.....	1°C
Commutation Current, not more:.....	4A
Consumption Current, not more:.....	100mA
Thermosensor cable length:.....	3m±0,1m
Connective cables length:.....	0,15m
Weight, not more:.....	0,11kg
Dimensions:.....	70x51x21mm
Indicator dimensions:.....	23X14mm
